SUMMARY

Third-year B.Tech Computer Engineering student (5th semester) at Dharmsinh Desai University with a CGPA of 8.6/10 through Semester 4. Builds backend systems in Java and Spring Boot backed by strong Data Structures & Algorithms fundamentals, and has shipped full-stack applications integrating REST APIs, relational databases, and third-party AI services. Seeking a Backend/Software Engineering Internship to contribute to production-grade, scalable systems.

TECHNICAL SKILLS

Languages: Java, C, C++, Python, PHP

Frameworks: Spring Boot, Spring Security, Django, React.js

Databases & Tools: MySQL, PostgreSQL, Git, GitHub, Postman

Concepts: REST API Design, JPA/Hibernate, OOP, JWT-based Authentication

CS Fundamentals: Data Structures & Algorithms, DBMS

EDUCATION

B.Tech, Computer Engineering — Dharmsinh Desai University, Nadiad, Gujarat

Expected May 2028

Currently in 5th Semester | CGPA: 8.6 / 10.0 (through Semester 4)

PROJECTS

AI Expense Tracker | *Java, Spring Boot, React.js, PostgreSQL, JWT, REST APIs, Google Gemini AI*

- Integrated Google Gemini AI to parse raw transaction text, auto-categorize expenses, and generate personalized budget predictions.
- Enabled dynamic category creation: when an expense doesn't match an existing category, Gemini AI generates and adds a new relevant category automatically, keeping the categorization system adaptive rather than limited to a fixed list
- Implemented JWT-based authentication with Spring Security, using stateless tokens and password hashing to secure user sessions and protect account data.
- Designed a decoupled full-stack architecture, connecting a React.js frontend to a Spring Boot REST API backed by PostgreSQL for structured, relational storage of user expense data.
- Built a responsive financial dashboard in React with a deterministic color-palette algorithm to visualize live transaction data by category.

[GitHub Repository](#)

College Recommendation System | *Python, Django, MySQL*

- Designed a weighted ranking algorithm that scores and ranks colleges based on placement rate, tuition, ratings, and location, matched against student preferences.
- Built a student-facing bookmarking feature allowing users to search colleges, save favorites, and browse them by category.
- Structured a MySQL database with an admin-managed interface for maintaining listings and ensuring fast, secure search.

ACHIEVEMENTS

- **Built end-to-end Java-based projects independently** — from database design to backend API development to frontend integration — across REST APIs, web applications, and recommendation systems.
- Applied strong Data Structures & Algorithms fundamentals directly to backend.
- Maintained a CGPA of 8.6/10 while consistently building practical software projects outside the curriculum.
